

Bunny Body Signals

What their body and mood are telling you

Body condition, at a glance

Too thin

Spine/hips easily felt, no fat cover

Ideal

Ribs felt with slight fat cover, visible waist

Overweight

Ribs hard to feel, no waist definition

Reading the signals

Happy looks like

- ♥ A binky (joyful mid-air jump-twist)
- ♥ A dramatic, relaxed flop onto their side
- ♥ Chinning objects (marking territory)
- ♥ Relaxed, forward-facing ears

Stressed looks like

- ♥ Thumping a hind foot
- ♥ A flattened body with wide, alert eyes
- ♥ Loud teeth grinding (different from soft contented grinding)
- ♥ Circling or nipping when handled

A few enrichment ideas

- ♥ A cardboard tunnel gives them a safe route to dash and explore through, which they genuinely love
- ♥ Supervised, bunny-proofed floor time lets them stretch their legs and binky freely
- ♥ Willow or wood chew toys satisfy their constant need to gnaw and help wear down their teeth
- ♥ Gentle grooming sessions double as bonding time, especially useful during heavy shedding

Bunny Must-Knows

1

Hay should be about 80% of their diet, available 24/7

2

Never feed onions/garlic (damage red blood cells) or avocado (toxic compound called persin)

3

Always support the hindquarters — never let the back legs dangle or kick free

4

Not eating for 6+ hours can signal GI stasis (their gut slows or stops, letting gas build up dangerously) — call the vet

5

Rabbits tolerate cold far better than heat — keep their space under 77-80°F

Bonus fun fact

A rabbit's eyes are positioned to give them almost 360-degree vision, all the better to watch for predators.

Loved these? Winnie has so much more.

The Bunny Parent Guide, Sitter Kit & Journal go way deeper — checklists, trackers, keepsakes & more, made just for your bunny.

Bunny Emergency & Prep

What to watch for, and how to get ready

Call the vet if you see

- ♥ Not eating hay or refusing food for 6+ hours — can signal GI stasis (their digestive system slows or stops, letting gas and bacteria build up dangerously fast), a real emergency
- ♥ Few or no droppings, or unusually small/dry ones
- ♥ Sneezing, discharge, or noisy breathing
- ♥ Hunched posture, teeth grinding, or a head tilt

If something risky gets eaten

Call your vet or the ASPCA Animal Poison Control Center:
(888) 426-4435 — available 24/7
